NGUYEN DUY BACH

FRONTEND DEVELOPER

duybachnguyendev@gmail.com | portfolio | +847972298202

Summary

- With about 2 years of experience working on multiple professional projects, including CRM, CMS, and e-commerce systems, I can quickly design and build visually appealing interfaces while optimizing user experience.
- Built SSR-based applications with a focus on SEO and performance optimization, designed highly reusable components using the Compound Component pattern, and maintained clean, scalable code.
- Ability to understand system architecture and design systems to build scalable and consistent user interfaces.
- Interested in exploring new technologies and researching AI applications in software development (MCP, Workflow with AI) .

Technical Skills

Core programming:

- JavaScript / TypeScript, HTML, CSS3, Design System, Atomic design

Frameworks & Libraries:

- ReactJS, NextJS, TailwindCSS, Tanstack Tech, Zustand, TipTap, Framer Motion

Tools:

- Vite, Webpack, Nx, Docker, Git, Notion

Soft Skills:

- Team communication, Task estimation and planning, Time management.

Education & Certification

Bachelor of Information Technology

- GPA: 3.3
- Field of Study: Software Technology
- English: B1 Level (University-issued Certificate).
- Institution: Ho Chi Minh City University of Industry and Trade

Recent Experience

MeU Solutions | October 2024 - December 2025

Front-end Developer

PROJECTS:

Firt Green Internal Network Social (02/2025 - 05/2025)

Project description: Developed an internal social networking platform for First Green that enables employees to share posts, company news, and interact within the organization. The system includes management modules for posts, users, groups, resources, and notifications, helping improve internal communication and collaboration.

Technologies:

- ReactJS, React Router, Shadcn/UI, TailwindCSS, Tanstack (Query, Table, Virtual), Zustand, Socket IO.

Responsibilities:

- Set up the project structure and configured core libraries including React Router, TanStack Query, and implemented a custom Zustand store with persistence to manage and encrypt authentication and user profile data.
- Implemented Optimistic UI with TanStack Query to provide instant feedback for user actions such as likes and comments.
- Built a Provider to manage infinite scrolling for posts and comments, improving the user experience when loading data.
- Implemented a socket client to receive and handle real-time notifications.

Samco Ecommerce Automation (07/2024 - 09/2025)

Project description: Developed an electric vehicle e-commerce website for Samco Bình Tân inspired by the official VinFast website, featuring product showcases, vehicle sales (cars and electric motorbikes), and after-sales services.

Technologies:

- NextJS, Shadcn/UI, TailwindCSS, Tanstack (Query, Table), Tiptap, Zustand.

Responsibilities:

- Implemented Server-Side Rendering (SSR) for public pages to improve SEO and initial page load performance. Implemented ISR for the About page to improve performance while enabling periodic content updates.
- Implemented Open Graph metadata for product pages to optimize social media link previews (Facebook, Zalo) and improve product visibility when shared.
- Extended the Tiptap editor by building custom extensions to support components such as Button, Tag, and Separator in the rendered output.

Noblelift Forklift Supply Chain Management System (08/2025 - 12/2025)

Project description: Developed a digital system for Noblelift forklift sales management, handling the entire process from sourcing and container import to warehouse management, delivery, repair, configuration, and warranty management. The system supports warehouse-based authorization and system-wide statistics.

Technologies:

- ReactJS, React Router, MUI, TailwindCSS, Tanstack (Query, Table, Virtual), Zustand, Socket IO.

Responsibilities:

- Built a reusable table component with infinite scrolling and virtual scrolling to optimize performance for large datasets (1 - 1000 rows).
- Participated in designing and implementing the delivery feature from concept to implementation, including order product management (create, update, delete), order detail viewing, tracking history, and return handling.
- Designed and implemented notification feature from UI/UX design to frontend implementation (view, mark).
- Participated in designing and developing the multi-assembly/disassembly workflow for configuration and repair processes. Built reusable components using the Compound Component pattern to manage multiple configuration and repair forms (create, update, delete, save), and integrated APIs based on business logic.
- Built a dynamic filtering system using React Hook Form and Zod with the Compound Component pattern to support statistic features.
- Built a dynamic analytics feature that allows users to drag and drop fields into rows or columns to create customizable reports, with drag-and-drop (DnD) support.
- Collaborated with team members to split tasks and supported fixing bugs across different features.
